

HERA VALUE

EASY TO LEARN, EASY TO USE

- Flexible architecture is adaptable to different laboratory scenarios and further developed by user experience. Improved rules for customization of any laboratory workflow
- State-of-the-art technology for more security in data management, simplifying the laboratory accreditation process
- Streamlined user interface
- Compliance with GDPR requirements
- CE marking

AESKU DEDICATED TEAM **DEVELOPS** THE SOFTWARE **SOLELY IN-HOUSE**

MODULAR

New 'self-contained' features can be independently deployed as modules on the HERA platform

PORTABLE

Ready for standalone implementation (app) running on small and portable instruments as POC

VERSION 001: 2019.07.05

CONVERT DATA INTO INFORMATION

HERA

THE AESKU LABORATORY MANAGEMENT SOFTWARE

HERA – THE AESKU LABORATORY AUTOMATION MANAGEMENT SOFTWARE

HERA is a smart gateway between analyzers and the LIS. HERA is a highly flexible software solution, offering full connectivity and result management through its powerful expert control system.

HERA is a scalable solution for controlling various degrees of complexity in clinical laboratories, from small laboratories to multi-site and multi-LIS organizations.

OPEN AND FLEXIBLE SOLUTION

Multi-Site, multi-Lab, multi-LIS

HERA is particularly flexible in terms of instruments and LIS connectivity, offering the ability to manage multiple instruments, LIS connections, users, and even multiple laboratory sites. HERA offers added value by aggregating the exchange of information between connected instruments and LIS.

User-rights management

Within the limits of their access and viewing authorization, HERA users can obtain a centralized view of all the laboratory, regardless of the workstation from which they gain access.

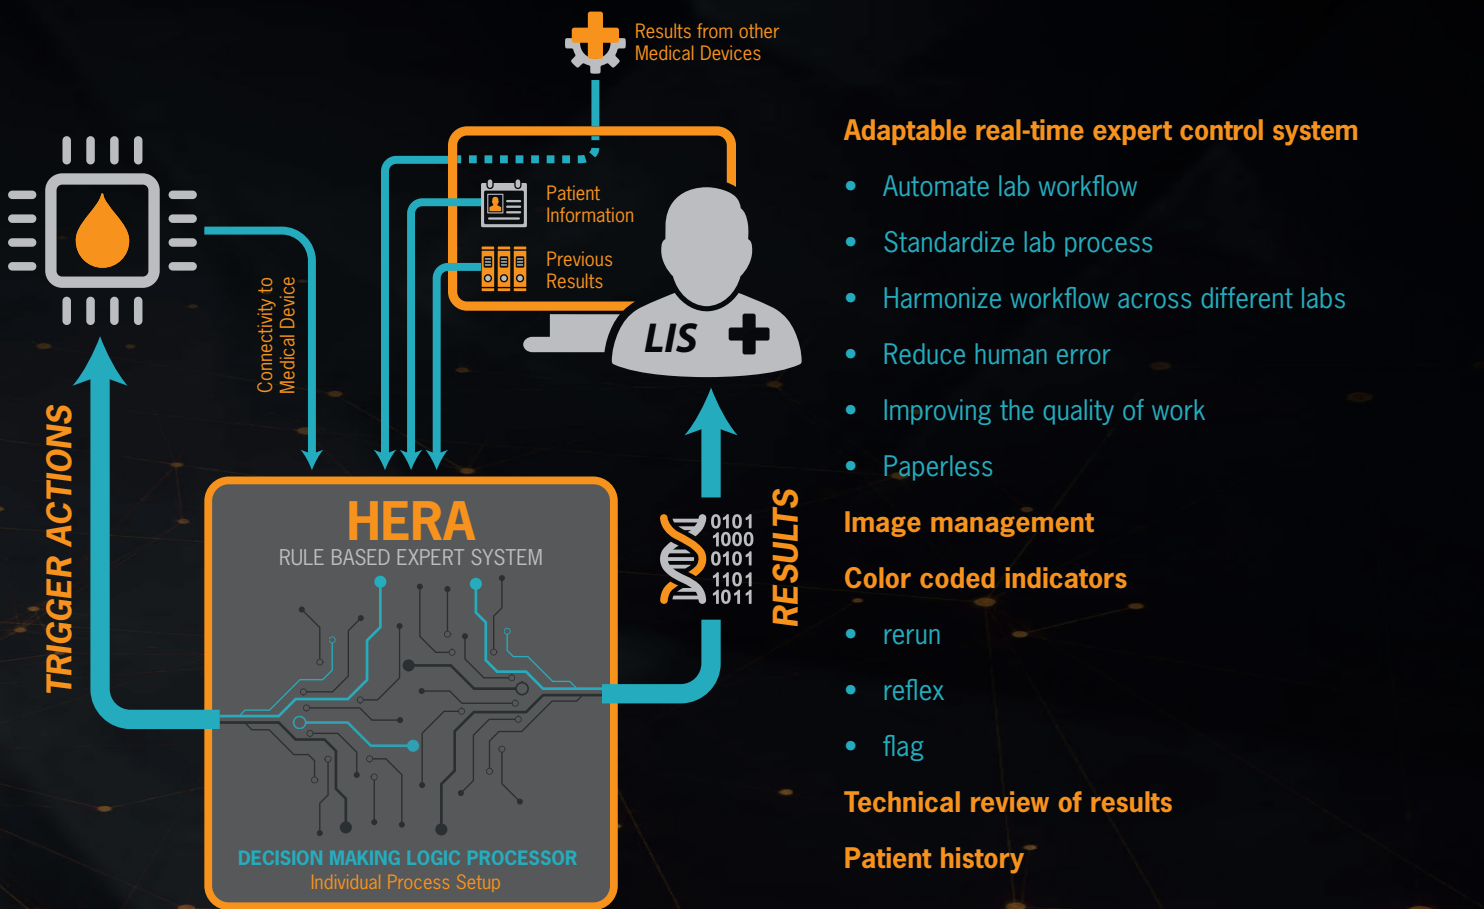

Powerful communication engine:

Connect to LIS (ASTM,HL7) and connect to any analyzer

RESULT MANAGEMENT

HERA enables the central management of analytical instruments that support global process control and ensure a complete response to the connectivity requirements of analytical laboratories.

HERA's main task is to manage and validate incoming information obtained from IVD analyzers connected to the system through connections to various analytical instruments, supporting the user with real-time notifications, alarms, and comprehensive patient history. Thanks to the powerful integrated rule-based expert system, HERA can automate the clinical laboratory process by applying user-definable rules to the pre-analytical, analytical, and post-analytical laboratory workflow.

TECHNICAL HIGHLIGHTS

HERA is a web based application with touchscreen optimized GUI.

The application is operating system independent (Linux/Windows) and runs on real and virtual environments.

HERA uses standard or custom communication protocols to connect to any LIS/driver software.

REAL-TIME ERGONOMIC DASHBOARD FEATURING

- Simple and intuitive touchscreen interface
- One-click access to essential information
- Instrument Overview
- Sample Status Overview
- Test status Overview
- Alarm panel
- Sample logging
